

Support size and collision probability

Both profiles contain $T = 1000$ entries. Profile A has larger support, but $M_{50}(A) = 17 < 38 = M_{50}(B)$.

Profile A

one fiber: 101 • • • • • • • • • • + 899 singletons

$$R/T = 0.90, \quad \alpha_A^{\text{neq}} = 101/9990, \quad M_{50} = 17$$

Profile B

•• •• •• •• •• •• •• •• •• •• 500 pairs

$$R/T = 0.50, \quad \alpha_B^{\text{neq}} = 1/999, \quad M_{50} = 38$$
